

Also I found that they have changed how you access Series = 1 info. The codes have changed and I only found this by using the ODBC interface with Excel. I had to change the query:

```
SELECT * FROM [MyCustomerNumber-Detail] WHERE Series = '1' and Code > 1 and code < 6  
AND Description is not null
```

to:

```
SELECT Code, Description FROM [MyCustomerNumber-Detail] WHERE Series = '1' and Code  
> 1000100001 and code < 1000100006 AND Description is not null
```

I hope this info helps.

I'm querying the 2023 Lacerte tables.

Also, you may need to install Lacerte 2024 and authenticate with it if you are querying 2024 table data.

Best regards,

Rick Kamp, EA
